ReNEW Water Project

Oct 1, 2018 Press Release

Led by the Water Environment Federation (WEF), the ReNEW Water Project pulls data to measure nutrients, energy and water recovered by U.S. Utilities. Water reuse volumes totaled 2.2 billion gallons per year for a 7 percent recovery rate, and was used primarily for irrigation and groundwater replenishment, as well as other non-potable uses. Biosolid volumes measured 3.4 million dry metric tons per year for a 51 percent recovery rate and was used for fertilizer, composted and applied to the land.

WEF will announce additional recovery goals for water utilities, later this fall.

Other supporting organizations include the Association of Clean Water Administrators (ACWA), National Association of Clean Water Agencies (NACWA), and The Water Research Foundation (WRF) to name a few.

America's Water Infrastructure Act—2018

This bill requires the U.S. Army Corps of Engineers, each fiscal year, to submit to Congress a five-year budget and work plan for projects of national significance. Projects must be carried out in a sustainable manner that focuses on water resource challenges and opportunities, promotes collaboration, and pursues integrated water resource management.
