2018 Active Wildfires across California

It is haunting to watch and hear about the death and destruction caused by the wildfires across California. With possible rain storms approaching, the nation is hopeful the fires will be tamed rather than cause more damage with mudslides.

11-20-18 Daily Stats—84 state-wide deaths. 248,221 acres consumed by active fires across California

Hill Fire & Woolsey Fire (in South Simi Valley) burned 96,949 acres. It is said to be 98% contained.

Camp Fire located in Butte County, took 81 civilian lives, burned 151,373 acres and is 75% contained.

Active Fire

Contained Fire

Lightning Complex

This map provides general locations of major fires burning in California. The fire locations are approximates. Some of the fires on the map are not in the jurisdiction of CAL FIRE and are under the command of another local or federal fire agency.

Midwest Food Products Association, Inc.

The Annual Convention next week, brings together leaders in the food processing industry to discuss trends, view new technologies, share expertise, and network with professionals in different companies and disciplines. The goal of this annual event is to give attendees the information and resources needed to meet the challenges of customer demands and government oversight. Visit American Structures at booth #704.

USGS Current Water Data for the Nation Daily Streamflow Conditions

Tuesday, November 13, 2018 12:30ET

Explanation

- High
- > 90th percentile
- 76th - 90th percentile
- 25th - 75th percentile
- 10th - 24th percentile
- < 10th percentile
- Low
- Not ranked

The colored dots on this map depict streamflow conditions as a percentile, which is computed from the period of record for the current day of the year. Only stations with at least 30 years of record are used. The **gray circles** indicate other stations that were not ranked in percentiles either because they have fewer than 30 years of record or because they report parameters other than streamflow. Some stations, for example, measure stage only.

United States Geological Survey (USGS)

The USGS provides science about natural hazards that threaten lives & livelihoods. Essentials such as water, energy and other natural resources we rely on.

Monitors the health of our ecosystems and environment; evaluates how climate and land-use changes impact our future.

The USGS develops new methods and tools to supply timely, and relevant information about the Earth and its processes.
