OVER 40 YEARS IN TANK MANUFACTURING

Mar. / Apr. 2019

Volume 7 Issue 3
TANKS, TIPS & TRENDS

What's New?

American Structures donated this laser-cut, stainless steel fire ring for the 2019 Sportsman's Raffle at the Wisconsin Rural Water Association (WRWA) Conference, held in La Crosse, WI. Join us in honoring our military veterans. This years fire ring recipient was Dave Bekkum, from the Village of Cashton, WI. Enjoy your fire ring Dave!

American Structures employs veterans and proudly supports causes to help veterans across our communities.

LAND OF THE FREE, BECAUSE OF THE BRAVE.

Spring changes on the horizon

Soon in 2019 you will have the option to customize your tank with Staggered or Vertical Seams.
Check back for more updates.

OVER 40 YEARS IN TANK MANUFACTURING

Great floods have flown from simple sources. - William Shakespeare

The Water Is High

Spring flood waters have swelled to alarming levels. According to the National Oceanic and Atmospheric Administration (NOAA), ***Record Flooding*** *is defined as flood waters which* equals or exceeds the highest stage or discharge observed at a given site during a period of time. ***Major Flooding*** is extensive inundation of structures and roads. Significant evacuations of people and/or transfer of property to higher elevations. ***Moderate Flooding*** is measured by the need for 'some' evacuation of people and/or transfer of property to higher elevations and 'some' inundation of structures and roads near streams. ***Minor Flooding*** is minimal or no property damage, but possibly some public threat (e.g., inundation of roads).

The following map depicts the areas of the United States where there is a greater than 50-percent projected chance of major, moderate or minor flooding during March through May, 2019.
