2020 is a milestone year for American Structures. Please join in our excitement as we celebrate 45 years of manufacturing bolted stainless steel tanks. Established in 1975 by Earl W. Wildenberg,

Founder and President, it all started with a simple American dream of building American made structures from start to finish, including setting foundations, site work and tank erection. The company has now expanded across 42 states and 8 countries and includes hundreds of tank projects manufactured for industrial, municipal, agricultural and commercial customers. We take pride in using

American sourced stainless steel for all our fabrication work. We strive to support a variety of State Rural Water Associations as well as National organizations including American Water Works Association (AWWA), Water Environment Federation (WEF), American Concrete Institute (ACI), American Society of Agricultural & Biological Engineers (ASABE) and American Society of Civil Engineers (ASCE) to name a few.

American Structures, Inc.

**Bolted Stainless Steel Tanks
Menomonie, WI**

Much like companies with longevity, foundations start with hard work; concrete forms, rebar & thousands of cubic yards of concrete. It is essential to have a level and firm foundation. After all, it is the base for erecting our tanks.

American Iron & Steel Institute (AISI) 304 is an austenitic stainless steel. All materials in contact with the stored water are certified and listed to meet ANSI/ NSF 61. Stainless Steel bolts meet ASTM F593 required standards.

Years ago, metal fabrication work was done with hydraulic shears or press brakes and manual CNC machines. Now we have two laser cutting machines to sharpen our productivity and increase our company-wide efficiency.

On behalf of everyone at American Structures, thank you for supporting our progress. We look forward to the next 45 years with humble hearts.
